TAMMS THIN PATCH

Cement Based Patch & Repair Mortar

- ▶ A polymer modified, cement based compound from Euclid Chemical designed for patching and repairing concrete and masonry.

Tamms Thin Patch

Cement Based Patch & Repair Mortar

Product Description:

TAMMS THIN PATCH is a polymer-modified, cement based mortar formulated for repairing defects in concrete and masonry surfaces from featheredge up to 2.5 cm.

TAMMS THIN PATCH is packaged in 25 kg poly lined bags. The material simply needs to be mixed with potable water before it is ready to use.

When mixed with water TAMMS THIN PATCH produces a putty like mortar with excellent wash out resistance and a powerful bond onto concrete substrates.

For more information and application instructions visit www.flowcretesa.co.za/euclid-chemical

Product Benefits:

- Single-component, cement based compound available in two pack sizes
- Trowelable repair mortar that is easy to use and install
- Offers excellent long-term durability
- Offers outstanding bond strength
- Delivers a featheredge up to 2.5 cm

Application Suitability:

- Horizontal, vertical or overhead repairs
- Interior and exterior use
- Fill small holes, honeycomb and spalled areas
- Repoint mortar joints

Tamms Thin Patch Technical Snap Shot

Set Times ASTM C 266		Flexural Strength ASTM C 348	
Initial Set:	30 - 50 mins	7 days:	4.3 MPa
Final Set:	1 - 2 hours	28 days:	5.0 MPa
Compressive Strength ASTM C 109		Split Tensile Strength ASTM C 496	
1 day:	8.3 MPa	7 days:	1.4 MPa
28 days:	24.1 MPa	28 days:	2.0 MPa

The Euclid Group unites several of the world's leading construction chemicals brands in business together to offer a truly global service to customers. Its combined portfolio includes: concrete admixtures; chemical fibers; construction products; mining & tunneling products; specialty polymer flooring; grouts & leveling compounds; parking deck coatings; and decorative concrete.
