

# Concrete Etchant

## Concentrated Acid Cleaner

### Description

Concrete Etchant is a concentrated acid with surfactants to assist degreasing.

### Uses

It is used for the etching of concrete floors prior to painting or specialised coatings and can also be used for removing unsightly deposits of cement from face bricks and construction machinery.

### Application

- Wet surface thoroughly with fresh water prior to acid etching.
- Use 1:2 with water and apply with a brush by working from the bottom upwards.
- Leave until effervescence ceases and flush off with a strong jet of water.
- Theoretical coverage: 100m<sup>2</sup>/25ℓ.

### Precautions

- Corrosive to skin. Wear protective clothing and avoid contact with eyes and skin.
- If skin contact should occur rinse well with water.
- For eye contact rinse well with water and call a physician.
