

SCALE OFF 4

SCALE-OFF-4 is an inhibited rust removing liquid metal conditioner, which destroys rust stimulators and etches as it cleans to provide a strong bond for paint. It will rapidly penetrate and remove heavy rust, leaving a complex phosphate coating.

SCALE-OFF-4 can be diluted with 1 part Scale-Off 4 to 2 to 4 parts water, depending on the severity of the corrosion problem. This solution can be applied to the surface by brush, mop or sponge. Allow 10 - 30 minutes for reaction to be completed, and then flush off with fresh water and allow to dry. A second application might be necessary. Organic coatings can now be applied in the normal manner.

ADVANTAGES

- Rapid derusting.
- Improved paint bond.
- Restricted rust creep should the paint coating be fractured.
- Superior paint finish.

PRECAUTIONS

Use protective clothing, always mix in a rubber or plastic container.
